

# The NiceHome System

The new concepts of alarm and integrated home management of NiceHome System to manage, dissuade, protect and warn.

Home Automation

Peace and comfort:  
with NiceHome solutions  
your home becomes  
practical, comfortable  
and safe

**Freedom from wires: speed of system set-up, economy, and flexibility**  
Totally wireless solutions and combined wired-radio systems guarantee maximum flexibility of installation even where wiring is a problem. A much simpler way of creating effective "made-to-measure" systems to protect and enhance comfort of the home!

**All under control, even from a distance**  
You can communicate from a distance with the NiceHome control unit in order to control its state via GSM or PSTN call.

**Be always serene**  
NiceHome adds more tranquillity to that offered by a traditional anti-intruder security system, with its anti-coercion and anti-assault functions. The former allows to insert a code that simulates the deactivation of the system, excluding the local alarm system activation, while transmitting a call directly to the police station or to any other pre-set number. The second allows to activate the external sirens in situations of possible danger only by pressing a button on the remote control.

**Emergency call**  
Each NiceHome control terminal, included the miniaturized pocket transmitter, gives you the possibility to program a direct call to the numbers in your address book in order to transmit a customized - voice or text - message with a request for help.

**Voice messaging**  
Deterrent messages emitted from the device within the protected area, giving prior notification of the activation of the alarm system, are very useful to discourage housebreaking attempts that, even if warded off by the subsequent alarm, may cause damages in the process. All NiceHome control units and sirens give the possibility to personally record a different deterrent message.

**"Pet Immunity" function**  
NiceHome HSD motion detectors are equipped with integrated Pet Immunity function, capable of recognising the presence of your little friends that might activate the alarm: a very useful function with no extra costs.

- Gates
- Garage Doors
- Road Barriers
- Rolling Shutters and Awnings
- Solar Screens
- Alarm System

## The new concept of protection for today's homes

Thanks to the system evolution and to the availability of new technologies, the present trend allows to protect an area dividing it according to a concept of "concentric circles".

- Deterrence from possible break-in attempts before they take place (in **Zone A**) thanks to voice messages emitted by the sirens.
- Activation of sirens on the first attempt at break-in through doors or windows (**Zone B**).
- Calls to police only when the internal detectors (**Zone C**) give notification of the break-in within the rest of the house.

**Zone A**, garden or terrace;  
**Zone B**, external doors and windows;  
**Zone C**, house indoors

## Local organisation

**Control key-pad,**  
wall-hung or portable

**Transmitter**  
8-channel transmitter with  
4 programmable keys:  
automations, lighting,  
irrigation etc.

**Transmitter**  
4-channel

## Deterrence and warning

**Alarm sirens**  
via radio for outdoors  
with wired connection  
to Dual Band  
connection with  
built-in flashing light.

The considerable sound power is a great deterrent while the flashing light allows to locate the position easily. The voice deterrent models do not disturb neighbours, but surprise and warn off intruders.

**Siren**  
via radio  
for indoors

## Remote organisation

**Voice messaging  
and sms**

**Tele Service  
Modem**

## Safety and protection

Controlled indoor detector  
with magnetic contact  
for detection of door  
and window opening

Controlled infrared detector  
with volumetric lens;  
it detects and give  
notification of possible  
movements within  
the protected area

Infrared detector with vertical  
scanning lens, to protect  
doors and windows

Volumetric infrared/dual  
technology via radio  
detector to sense  
any movement  
in the protected area

Double technology  
volumetric detector,  
via radio, to be used  
outdoors

Volumetric detector  
for window breaking

Controlled detector  
for volatile fine particles

Water detection probe

*All detectors have an estimated  
autonomy of over two years and the need  
to replace the battery is indicated  
with due notice.*

## Integrated management

**Control units for alarm systems  
via radio, Dual Band and combined,  
wired and via radio, bidirectional  
with GSM telephone dialling module.**  
The NiceHome control units can  
control not only alarm systems but also  
up to 16 automations or groups of  
automations, assigning the required  
times and modes to each.

**Miniaturised recessed receivers,**  
for control via radio of commands sent  
by the NiceHome system to switch on  
lights, activate heating and irrigation  
systems, boilers, and all Nice automations  
for gates, garage doors, awnings  
and shutters.

Rolling shutters

Irrigation

Lighting

## Click... Nice will take care of it!

With just one Nice transmitter, automations for gates, garage doors, awnings, rolling shutters and blinds are always under control as well as irrigation and garden lighting, and now also alarm systems.

Home Automation
